

WRAP SPAN & DISCONNECTING SPAN JOINT.

WRAP SPAN

This is your most cost effective option for maneuvering span joints around irregular field obstacles. With use on multiple spans, you can gain as much as 180° of flexibility to irrigate previously unavailable acres.

DISCONNECTING SPAN JOINT

With the Disconnecting Span Joint – a Reinke exclusive – you can disconnect one or more spans and proceed past an obstacle as you continue watering. An auto-stop function allows the parent system to self-align to the dropped spans, eliminating the need to babysit the system when it gets close to the pick-up spot.
